

LD11 Notebook QA Execution Report

Detailed quality and execution safety checks for the refined notebook.

Field	Value
Student	Ruturaj Mokashi
Topic	Learning Day 11 - Hyperparameter Tuning
Document type	Individual PDF documentation
Date	2026-06-14

Submission note

This is an individual PDF document. The documentation package intentionally does not include a combined/merged PDF.

1. Notebook Execution QA

Check	Result	Meaning
Total cells	91	Passed
Markdown cells	67	Passed
Code cells	24	Passed
Code cells with outputs	24	Passed
Error outputs	0	Passed
Inline pip/install cells	0	Passed
Max code cell length	34	Passed

2. Stability Rules Applied

Rule	Status	Why it matters
No inline package installation	Passed	Avoids environment changes that can kill the kernel.
No internet downloads	Passed	Notebook can run locally and offline.
No TensorFlow/Keras in extended notebook	Passed	Avoids heavy dependency/kernel issues in the supplementary notebook.
Stable built-in datasets	Passed	Datasets load directly from scikit-learn.
Short code cells	Passed	Max code cell length is controlled for readability.
Intro before code and conclusion after output	Passed	Supports learning and university readability.
No error outputs	Passed	Notebook executed cleanly in QA.

3. QA Recommendation

Use the refined detailed executed notebook as the submission-support notebook. Do not use earlier generated versions that included fragile package dependencies or data path issues. The refined version is the safe local version and is aligned with the user-approved notebook style.
